VISUAL DESIGN IDEATION

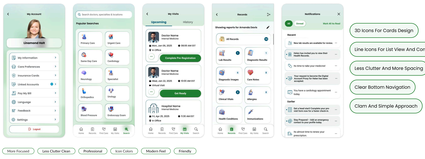
Final Concept Design:

Calm & Simple with Morphism



FINAL DESIGNS

Homepage Wireframe

Recommendations:

After both usability tests, a refined and updated homepage wireframe that reflects user preferences and feedback.

Top Navigation Bar

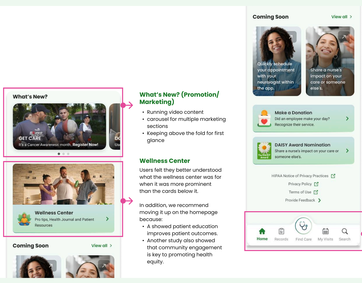
Users preferred the design in the top section for design 8 because overall they felt it was cleaner and simpler (expressed in optional open-text responses.)

Card Design

We used dots as an indicator for the carousel, however "half images" are a strong que that a carousel is present and users can scroll, as backed by Nielsen Norman.

Features

- Implementation on 3D icons on feature cards
- Overlay design for more features to avoid clutter



What's New? (Promotion/ Marketing)

- Running video content
- carousel for multiple marketing sections
- Keeping above the fold for first glance

Wellness Center

Users felt they better understood what the wellness center was for when it was more prominent than the cards below it.

In addition, we recommend moving it up on the homepage because:

- A showed patient education improves patient outcomes.
- Another study also showed that community engagement is key to promoting health equity.

Bottom Navigation

- Prominent 'Find Care'
- Replaced "Visits" to "My Visits," to make it clearer they are already scheduled.
- Replaced "Get Care' to "Find Care" in order to make it sound more action oriented.
